NEW FILM TECHNIQUES

JWC

STAT

STAT
STAT

is half a block from

STAT

The new film they are purportedly developing for the Air Force turns out not to be a new film but a new technique for packing information onto color film. Tad says they can pack information some 20,000 times denser than magnetic tape storage systems.

I could not go into it any further because it is a classified program and requires a need to know.

Tad very kindly provided the enclosed information on contracting officer, etc. If you wish to visit their plant and take a look at what they are doing on this program, you will have to obtain official authorization and need-to-know.

STAT

Dear Wil:

The map and its associated equipment can be seen here in [] or at the 15th Recce Tech, March Air Force Base, Riverside, California. Functionally, both units are almost identical. March is setting up a color film facility. They also have the map compilation teams and the SAC intelligence types. I suggest that the troops start here and, if they're interested, we swing over toward Riverside.

STAT

Need-to-know required at both places.

STAT

For [] must be requested through ASD, Wright-Patterson Air Force Base, Dayton

STAT

Request clearance to visit me. Purpose of visit to see AN/APQ-T10. Our contract [] Send clearance in to Security Officer, []

Request need-to-know on same equipment. Clearance
to visit (and also submit clearances to)

STAT

Director of Intelligence
March Air Force Base
Riverside, California

STAT

I suggest that a block of names be submitted for an extended period of visit. Both
and I can handle schedules internally to accommodate quick visits.

Sincerely,

STAT
